Glass Open Book

Techniglass Corporation

Techniglass specializes in developing innovative patented products for the advancement of hot and cold art glass technology.

Follow the company

Description:	Founded in 1998, Techniglass Corporation specializes in developing innovative, patented products for the art glass industry. Though glass making is an ancient art, the tools to make magnificent art need not be. Mike Hacikyan, is an engineer by profession and an artisan by choice. Mike designs all Techniglass products keeping the following principles in mind: Simplicity: The product must be easy and comfortable to use. Affordable: All products need to be manufactured and retailed at a price point which hobbyist and professionals find affordable. Safety: The product must be safe to handle and prevent even the most minor accidents from occurring. Tool-less: No hand tools should be required for installation. Efficient: The product should produce the desired result with minimum effort, expense or waste. Universal: Grinder accessories are designed, as generic or universal, as possible, to fit most or every grinder model. Pleasure: The product should enhance the art glass making experience. Quality and innovation are given at Techniglass. All products are rigorously tested before launch and further quality control tested when in production. These simple, yet important product features are fundamental to the success of Techniglass. Techniglass continues to advance art glass technology today, tomorrow, and in the future.
