Glass Open Book

Sono-Tek Corporation

Description:

Sono-Tek creates a clear alternative to typical coating technologies by combining cutting edge technology, applications expertise, and a true passion for the coating process. We care deeply about our customers' success, and it shows in our dedication to understanding our customers' needs.

Our mission is to provide

- Proven, reliable full coating solutions
- Maximum process benefits for each customer
- Full service and support worldwide

Sono-Tek designs, builds, installs and services ultrasonic coating systems for R&D through high volume manufacturing operations worldwide. We have replaced or improved thousands of inefficient traditional coating methods in industries such as printed circuit board fluxing, electronics photoresist deposition, medical device coatings, and nanocoatings onto glass and textiles. In recent years, we have introduced our ultrasonic technology into many new markets by leveraging our unique technologies, vast application knowledge, and strong engineering team. For us, always developing means we are constantly finding new applications that benefit from our unique technology.

Location: United States

Sectors: Flat / Float glass

Activities: Equipment / Machinery supplier
